

Company Background

Headquartered in Golden, Colorado, Epilog Laser was created in 1988 to bring flying-optics based CO₂ laser engraving systems to both commercial distributors, small business owners and the home craftsman.

CO₂ laser engraving systems can cut and engrave into wood, acrylic, plastic and many other materials. These types of systems also do well on stainless steel and coated metals.

Due to the increased need for convenient metal marking solutions, Epilog Laser expanded its product line to offer a fiber laser system that allows users to mark directly on metal surfaces including titanium, steel, aluminum, carbide, alloys, brass, and more.

The company is now the leader in designing and manufacturing flying optics based CO₂ and fiber laser systems.

Mission

Epilog Laser strives to create laser products that add value for our customers. We design and manufacture products that provide the highest caliber performance, functionality, and reliability at a price that allows our customers to realize their maximum profit potential.

Innovation – A Company of “Firsts”

From the first laser to “print” directly from CorelDraw, to the first rotary attachment, to the first large-format table, to the first 100-watt laser, Epilog is known for implementing useful features that enhance our customers’ ability to work more efficiently and reap higher profits. Since Epilog Laser has been manufacturing CO₂ and fiber laser engraving systems longer than anyone else in the industry, we have a unique perspective and solid understand of what our customers need and want when it comes to engraving, marking, and cutting. Through creativity and innovation, we’ve been able to meet and exceed customer expectations by developing innovative products that are exceptionally versatile and user-friendly.

Dedicated

In addition to our industry leading laser equipment, Epilog Laser is recognized throughout the world as having the most experienced and knowledgeable sales and technical support teams. Our dedication to developing and nurturing long-term relationships with our worldwide distribution channels ensures our customers will always have the most experienced sales and support professionals available long after the initial sale. As technologies evolve and customer needs become more sophisticated, we realize the importance of continuing education in the laser engraving industry. Epilog Laser is widely recognized as the best source of aftermarket training programs in the industry. Customers are encouraged to attend our users’ clinics and seminars, which provide an excellent means of discovering the latest in laser technology, as well as learning about new products and trends from other engraving professionals.
