Windows 7:

Setting up the TCP/IP Address in the Computer

Windows 7 uses a slightly different, but very similar protocol than previous versions of Windows to install the TCP/IP address in your computer. These instructions will guide you through the Windows 7 protocol.

Once you have set the IP Address at the laser, you will need to set the TCP/IP address on your PC.

From the Start menu at the bottom left corner of your PC monitor, select Control Panel.

Click on Network and Sharing Center.
Click on Change adapter settings

Select the Local Area Connection option and then right click on Properties

Highlight Internet Protocol Version 4 (TCP/IP) and then click on Properties
Select *Use the following IP address*:

Type in the following IP Address and Subnet mask:

192.168.3.3

255.255.255.0

You can leave the Default gateway blank.

This number is not an error; the last digit of the IP address in this window must be different than the IP address set in your laser system.

Click the **OK** button in this window and then click on the **Close** button in the next window.

*That's it!* The IP Address in your computer is set. Your computer will be able to talk to your laser after you install the print driver (which is the next step).
